Choose your coins wisely!

ISO 20022

ISO 20022 is a multi-part International Standard prepared by ISO Technical Committee TC68 Financial Services. It describes a common platform for the development of messages.

Is it important to be ISO 20022 certified?

Standardizing software stacks are how different platforms can communicate with one another. When it comes to FINTECH, this becomes paramount as it impacts the worldwide monetary system. Without standards, no platform could comminate with one another.

What Cryptocurrencies are ISO 20022 compliant?

Becoming ISO 20022 is time consuming. The current list of cryptocurrencies include: XRP, XLM, QNT, ALGO, XDC, and ANA. These projects are ahead of other cryptos which are required by certain industries (i.e., banking).

Key Takeaway: The worldwide consortiums of the International Monetary Fund (INF) will require this certification for moving money

Always do your homework when investing in cryptocurrencies!

XRP is the 6th ranked cryptocurrency in terms of market cap.
